Statistics highlight the gender gap in retirement savings - women must work 25 years more to retire with the same amount of super as men; Australian women earn less than men (18%-24% less) and through casual/part-time work, which contributes to gender gap retirement savings. This also affects the amount of retirement savings women have prior to commencing their small business. 83% of women aged 40-65 do not feel prepared for retirement.

Women in small business can also be managing family responsibilities (child care/after school) which also affects lack of time/focus spent on personal retirement planning issues.
