1001 CYBER SECURITY TIPS

CAMERON LYNCH Head of Cyber Security, BGC LinkedIn: https://www.linkedin.com/in/cameronlynch1/

Cameron leads cyber security initiatives at a construction and manufacturing firm. He bridges technology and business strategy, translating technical concepts into business-

driven solutions. His leadership fosters effective, growth-enabling security teams aligned with business strategies, promoting innovation, risk management, and team empowerment

TIP 1: USE GOVERNMENT GRANTS FOR UPGRADES

Utilise government initiatives and grants for technology upgrades. Programs like the Small Business Technology Investment Boost can help fund essential cyber security measures.

TIP 2: CHOOSE AN ALL-IN-ONE IT PROVIDER

Select a reputable IT provider that offers both support and security services. This saves costs and ensures comprehensive coverage for your business.

TIP 3: DISCUSS CYBER SECURITY IN STAFF MEETINGS

Incorporate cyber security topics in regular staff meetings. Use resources from cyber.gov.au to keep employees informed about current threats and best practices. Pick a staff member who may be interested to help.

TIP 4: IMPLEMENT MULTI-FACTOR AUTHENTICATION (MFA)

Set up MFA for all business accounts. This extra security layer reduces the risk of unauthorised access, even if passwords are compromised.

TIP 5: ENSURE RELIABLE BACKUPS

Make sure your IT provider offers robust backup solutions. Regular, automated backups are crucial for data recovery in case of cyber incidents. Ask them to provide you a monthly report that highlights any issues.

TIP 6: SCHEDULE AUTOMATIC UPDATES

Have your IT provider set up automatic software patches and updates. Keeping software up-to-date prevents exploitation of known vulnerabilities.

TIP 7: CONDUCT REGULAR SECURITY ASSESSMENTS

Regularly review and update your security measures to identify and fix vulnerabilities, ensuring your defences remain effective. Ask your IT provider to review your security against Australia's Essential Eight guidelines.

TIP 8: INVEST IN MICROSOFT 365

Invest in the Microsoft 365 platform as your all-in-one IT solution. It simplifies your business IT systems and includes built-in security features.

TIP 9: DEVELOP A CYBER SECURITY POLICY

Create a clear cybersecurity policy outlining employee roles, acceptable technology use, and incident reporting procedures. Refer to cyber.gov.au for free resources and information.

1001 CYBER SECURITY TIPS

TIP 10: VERIFY FINANCIAL TRANSACTIONS

Train staff to verify any payment or bank account changes. This helps prevent fraud and unauthorised transactions.
